Methodological Report:
Michigan State University
State of the State Survey 69
(Fall 2014 Round)

December, 2014

Graham L. Pierce
Institute for Public Policy and Social Research
Michigan State University
The State of the State Survey (SOSS) is administered by the Institute for Public Policy and Social Research of Michigan State University.

For the benefit of sponsors, consumers, and users of SOSS data, we have prepared this guide to the purpose, design, methods, and content of the survey.

Please address questions or comments to:

Graham L. Pierce, SOSS Project Manager, Michigan State University, Kellogg Center, 219 S. Harrison Rd. Room 95, East Lansing, MI 48824

1. Purpose of Survey

SOSS is a public opinion survey of the adult citizens of Michigan, conducted three to four times each year since October, 1994. It employs Computer Assisted Telephone Interviewing (CATI) technology to interview a stratified random sample of Michigan adults. Originally based only on household landline telephones, SOSS began including cell phones in Round 62 (Summer 2012). SOSS is a product of the Institute for Public Policy and Social Research in collaboration with the Office for Survey Research at Michigan State University.

Although dozens of surveys are conducted in Michigan every year, SOSS is the only one designed to provide a regular systematic monitoring of the public mood in the state. SOSS has five principal objectives:

1. To provide information about citizen opinions on critical issues
2. To provide data for scientific and policy research by MSU faculty
3. To provide useful information for programs and offices at MSU
4. To develop survey methods
5. To provide opportunities for student training and research

2. Calendar

People's experiences and the overall public mood change not only from year to year but also with the seasons. It is important to establish baselines for understanding what is a "normal" seasonal fluctuation and what is a more permanent change. For this reason, SOSS is typically conducted at regular quarterly intervals. Roughly one-fourth of the questions are repeated in each quarterly round.

3. Structure of the Questionnaire

The questionnaires for each round of the survey are designed by a different set of principal investigators, consisting of faculty, students, and staff at MSU and other higher education institutions, as well as researchers and staff at non-profits and other organizations and businesses. Each survey instrument consists of three main components: a demographic core, a non-demographic core, and client questions.

The demographic core contains questions on the social background and status of the respondents (age, sex, education, employment status, type of community, marital status, number of children, size of household, income, ethnic identity, etc.). This block of questions is repeated in each round, though more detailed questions on some of the dimensions (e.g., the number and ages of children) might be included in certain rounds based on client needs.

The non-demographic core contains additional questions that are repeated in every round of the survey in order to gauge broad shifts in the economic, social, and political orientations and status of the population. These include questions about consumer confidence, self-identification on a
liberal-conservative scale, partisan identification, assessments of presidential performance and
gubernatorial performance, and other issues.

Together the demographic and non-demographic core of the questionnaire take an average of
about 7 minutes of interviewing time to complete. The remainder of the interview typically lasts
around 13 minutes, so that on average each interviews takes about 20 minutes of the respondent's
time.

The Winter round each year includes questions on the most important problem that respondents
want the governor and legislature to address. It also includes an assessment of respondents’ trust
in federal, state, and local governments to make right decisions.

Beyond the core set of interview items, SOSS 69 included sets of questions on three topics:

1. Education
2. Health Care and Insurance
3. Children's Health and Nutrition

A word of caution is in order on the use of the data. Because of the inclusion of question-order
and question-wording experiments, the codebook for the survey, containing the weighted
frequency distribution of responses, may be difficult to interpret and must be used carefully.
Occasionally, alternative variants of questions will be combined into composite measures in the
final data that are distributed, but the original questions also remain in the codebook and data set.
It is the responsibility of the data users and analysts, not of SOSS, to assure that the appropriate
variants of questions are used in analyses and reports. A copy of the CATI interview program
with the logic and skip patterns (indicated by "[goto ...]" commands and "[if ...]" commands)
accompanies the codebook to help clarify the paths particular respondents would take through
the interview.

4. Management and Organization

SOSS and OSR staff are responsible for the technical work of programming the CATI survey
instrument, training and supervising interviewers, selection and administration of the sample,
coding and weighting of data, and preparation of the final data set and documentation. In
addition, SOSS and OSR staff work with and advise the principal investigators and other
researchers in the design of the sample and the survey instrument. Final approval of the survey
and sample design rests with the principal investigators and SOSS Director.

For each round of the survey, a small working group of principal investigators is responsible for
the design of the instrument for that round, subject to final approval by the SOSS Director, SOSS
Project Manager, and OSR staff. The working groups consist primarily of "principal
investigators" for the given round who have sponsored and funded the survey and will conduct
the major initial analyses of the data, provide public briefings, and have priority in analyzing the
data for publication for the six-month period following the end of the field period for that round
(more on data access below).
Working Group for the Fall 2014 survey:

Mildred Horodynski, Professor, Michigan State University College of Nursing

Rebecca Jacobsen, Associate Professor, Michigan State University Department of Teacher Education

Melissa Riba, Research Team Lead, Center for Healthcare Research & Transformation

Mary Smiley, Health Research Fellow, Center for Healthcare Research & Transformation

Barbara Smith, Associate Dean for Research, Professor; Michigan State University College of Nursing

Manfred Stommel, Professor, Michigan State University College of Nursing

Marianne Udow-Phillips, Director, Center for Healthcare Research & Transformation

Nagwan Zahry, Graduate Student, Michigan State University College of Communications Arts and Sciences

Funding sources for the Fall 2014 survey:

- Center for Healthcare Research and Transformation
- Michigan State University College of Education
- Michigan State University College of Nursing
- Michigan State University Institute for Public Policy and Social Research

5. Dissemination of Results

Each round of the survey has an identified set of principal investigators who have priority in access to the data for that round. The principal investigators have exclusive right to prepare scientific papers for publication from the data for that survey for a period of six months after the end of the field date.

Six months after completion of data collection, the survey data are made available on an unrestricted basis to the public via the State of the State Survey’s website (http://ippsr.msu.edu/soss/).

6. Sample Design

The referent population is the non-institutionalized, English-speaking adult population of Michigan age 18 and over. Since the survey was conducted by telephone, only persons who lived in households that had landline telephones or individuals who have a cell phone had a chance of being interviewed.

**Sampling.** One portion of the sample of interviews is derived from a new random-digit-dial sample of phone numbers in the state, while another portion of the sample of completed
interviews (usually 30-40% of the sample) is derived from re-interviews of individuals who had been interviewed two rounds earlier and who had agreed to be re-contacted. Roughly 80-90% of all respondents in each round of SOSS agree to be re-contacted. Re-interviewing individuals who constituted a representative random sample of the state’s adults should still constitutes a representative random sample several months later, if adjustments for any non-response are made.

Having a portion of each round of SOSS derived from re-interviews with individuals from a previous round enables a part of the SOSS sample to constitute a panel, so that change can be measured at the individual level from quarter to quarter – a distinct benefit.

Because of the rapidly growing percentage of adults who have opted not to have a landline for their household, but depend instead on their cell phones, SOSS began to include a sample of cell phone users in SOSS 62.

Respondents' households newly enlisted to participate for SOSS 69 in the landline sample were selected using list-assisted random-digit-dial (RDD) sampling procedures. Those being re-interviewed had been sampled and selected in this same manner when they were first recruited to participate in SOSS 66.

Ordinarily, the initial sample of randomly generated telephone numbers (landline or cell phone) is purchased from Survey Sampling, Inc. (SSI). SSI begins the process of generating phone numbers with the list of all working area code and phone number exchange combinations. In the case of this study, the universe was constrained to include only those telephone numbers that are active in the state of Michigan. From within this list of possible phone numbers, SSI eliminates those banks of numbers represented by the 4-digit suffix that are known to be unused or are known to be used only by institutions. Landline and cell phone banks of numbers are separated and sampled independently. To improve the efficiency of the landline calling, this sampling frame is separated into two strata: one comprised of all landline phone numbers that are listed in phone directories, and the other comprised of all landline phone numbers that are not listed in directories but which are members of banks in which at least one phone number is listed. We then request that SSI over-sample phone numbers from the listed stratum.

SSI screens the landline phone numbers generated. The resulting sample is then checked against SSI’s database of business phone numbers and checked for known disconnected numbers. Ordinarily, these numbers are removed from the sample and not called.

The cell phone numbers are similarly stratified into those that have recent billing activity (i.e., active) and those that do not (i.e., inactive). Only active phone numbers are called.

For SOSS 69, 11,606 phone numbers were used overall, 610 in the re-contact segment, 4,881 in the new RDD segment, and 6,115 in the new cell phone segment. The working phone number rate was 58.8% overall, 84.6% in the re-contact segment, 57.6% in the new RDD segment, and 57.3% in the new cell phone segment.

**Sample Weights.** Because of the split-sample approach, we have weighted each segment regarding selection probabilities, and then combined them into a single file. The combined data
The file is then weighted to be representative of the state as a whole. The details for weighting each segment are provided below.

Because of the stratification (i.e., listed vs. not-listed phone number strata, landline vs. cell phone) and the unequal sampling rates across the strata, it is necessary to use "weights" to correct for unequal probabilities of selection. Weights can also be used to adjust the marginals on selected demographics in the sample to match the corresponding marginals in the adult population of the state to correct for differential response rates.

As indicated above, the initial landline frame was stratified into listed numbers and not-listed numbers in 1+ banks, and then listed numbers were over-sampled. Other information from SSI indicates that 65% of households with phones have listed numbers. An initial weight, listwt, was constructed to adjust representation of listed and unlisted numbers in the data file, so that listed numbers comprised only 65% of all data records.

To construct the remaining weights, characteristics of the population were drawn from 2009-2013 American Community Survey data. To make generalizations about individuals' views and behaviors, it is necessary to ensure that each respondent in a survey sample has an equal probability of selection, or is represented in the data set as having had an equal probability of being selected. However, since households with multiple phone lines have more chances of being selected into the sample than those with only one phone line, this source of unequal chances has to be adjusted for in analyzing the data. Consequently, the SOSS interview included a question asking respondents how many separate phone numbers the household has. In the event of item non-response, the number of phone lines was assumed to be one. Each case was then weighted by the reciprocal of the number of phone numbers, and then adjusted so that the total number of cases matched the actual number of completed interviews. In the data set, this weight is named PHWT.

Similarly, an adult in a two-adult household would have half the chance of being selected to be interviewed as would the only adult in a single-adult household. This, too, requires adjustment to correct for unequal probabilities of selection. The interview included a question as to the number of persons 18 years of age or older living in the household. In the event of item non-response, the household was assumed to have only one adult. Each case was then weighted by the inverse of its probability of selection within the household, i.e., by the number of adults in the household.

In the cell phone segment, respondents were asked whether they also have a landline phone at their household (i.e., an overlapping dual frame design). Respondents were weighted by the reciprocal of the number of landline plus cell phone numbers they have. Furthermore, the cell phone was assumed to belong to the individual rather than the household, so the person answering the phone, if eligible, was the respondent.

These weights were then also adjusted so that the total number of weighted cases matched the actual number of completed interviews. In the data set, this weight is named ADLTWT.

At this point, the separate sample segments (i.e., landline and cell phone) were merged, and the adjustment made so that the proportion of cases that were cell phone-only matched the estimated
proportion for Michigan in 2012, based on the most recent National Health Interview Survey estimates.

Non-response adjustments were made subsequently using an iterative proportional fit method (i.e., raking). These adjustments were intended primarily to correct for differential non-response based on age, gender, and race within the adult population of the state. It is common for some groups of individuals to be more difficult to reach, or more likely to refuse to participate, in RDD surveys. For making generalizations about the population from which the sample was drawn, the accuracy of the results can be distorted by these non-response patterns. Consequently, it is common to weight cases in the sample to adjust for non-response. This is accomplished by weighting each case so that cases of each type appear in the sample proportionately to their representation in the general population.

For the State of the State Survey, cases are weighted so that the proportions of whites, African Americans, and other racial group respondents in the sample matched the proportions each of these groups in the adult population in the state based on the 2009-2013 American Community Survey 5-year estimates. In the data set, this weighting factor is named REGNRACE. Furthermore, cases were additionally weighted so that the proportion of male cases and female cases falling into each of the following age groups matched the statewide proportions in the 2009-2013 American Community Survey 5-year estimates: 18-29 years old, 30-39, 40-49, 50-59, 60-69, 70-79, and 80 or older. In the data set, this weighting factor is named SEXAGEWT. Since rounding and missing data sometimes result in the weighted number of cases differing slightly from the actual number, SEXAGEWT is adjusted slightly with ADJWT to ensure that the number of cases for each region in the weighted data set is the same as the actual number of interviews completed. Detroit continues to be a separate stratum to this point, but a new variable MSUEREGN was constructed to fold Detroit proportionately into the Southeast region within that variable. A new weighting variable (MSUEWT) was constructed to represent Detroit proportionately correctly within the southeast MSUEREGN.

Finally, each case was weighted so that the proportion of cases from each region in the total sample matched the proportion of adults from the corresponding region in the state's population based on the 2009-2013 American Community Survey 5-year estimates. The weighting factor for this post-stratification weighting in the data set is named STATEWT.

Once the sample was weighted by STATEWT, it was compared against the American Community Survey-based distribution of gender, race, and age, and against the regional distribution of Michigan residents 18 and older. A second iteration of weighting was conducted to bring all distributions within 1.10% of the actual values. The final weighting factor is named STATEWT2.

It is important to note that these weight factors were constructed sequentially and build on the earlier steps. Thus, SEXAGEWT weights cases adjusting for the number of phone lines, the number of adults in the household, the landline vs. cell phone proportions, the race category proportions within the state, and the gender x age category proportions within state. STATEWT weights cases by all of those adjustments implied by SEXAGEWT and adjusts the proportions of cases across regions. For developing statewide results, the user should use the data weighted by STATEWT2. For comparing the results among regions -- if Detroit is to be separate -- the user
should use the data weighted by ADJWT2. To compare directly the original MSUE regions, the data should be weighted by MSUEWT2.

Regions are defined as follows:

1. Upper Peninsula: Alger, Baraga, Chippewa, Delta, Dickinson, Gogebic, Houghton, Iron, Keweenaw, Luce, Ontonagon, Mackinac, Marquette, Menominee, Schoolcraft

3. West Central: Allegan, Barry, Ionia, Kent, Lake, Manistee, Mason, Mecosta, Montcalm, Muskegon, Newaygo, Oceana, Osceola, Ottawa

4. East Central: Arenac, Bay, Clare, Clinton, Gladwin, Gratiot, Huron, Isabella, Midland, Saginaw, Sanilac, Shiawassee, Tuscola

7. Detroit

**Sampling Error.** The sampling error can be estimated for each region and for the state as a whole at the 95% confidence level as follows:

\[
\text{Confidence Interval} = \pm 1.96 \sqrt{\frac{(P \times Q)}{(n-1)}}
\]

where n is the number of cases within the region or the total sample, P is the proportion of cases giving a particular response, and Q is 1-P. While this may vary from question to question depending on the pattern of answers, the largest margin of error would occur when P is .5 and Q is .5. Therefore, the margins of error for each region and the total statewide sample can be estimated as:

<table>
<thead>
<tr>
<th>Region</th>
<th>Number of Cases</th>
<th>Margin of Sampling Error</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>SRS*</td>
</tr>
<tr>
<td>1. Upper Peninsula</td>
<td>48</td>
<td>± 14.3%</td>
</tr>
<tr>
<td>2. Northern Lower Peninsula</td>
<td>70</td>
<td>± 11.8%</td>
</tr>
<tr>
<td>3. West Central</td>
<td>162</td>
<td>± 7.7%</td>
</tr>
<tr>
<td>4. East Central</td>
<td>103</td>
<td>± 9.7%</td>
</tr>
<tr>
<td>5. Southwest</td>
<td>157</td>
<td>± 7.8%</td>
</tr>
<tr>
<td>6. Southeast</td>
<td>400</td>
<td>± 4.9%</td>
</tr>
<tr>
<td>7. Detroit</td>
<td>62</td>
<td>± 12.5%</td>
</tr>
<tr>
<td><strong>Statewide Total</strong></td>
<td><strong>1002</strong></td>
<td><strong>± 3.1%</strong></td>
</tr>
</tbody>
</table>
Taking the Design Effects from landlines vs. cell phone, listed vs. unlisted, and across regions into account, the overall margin of sampling error statewide is ± 3.9%.

7. Field Procedures

**CATI System.** Interviews were conducted using the Computer Assisted Telephone Interviewing system (CATI) of IPPSR's Office for Survey Research (OSR). OSR uses the Computer Assisted Survey Execution System (CASES, version 5.5) software for its CATI system. CASES was developed by the University of California–Berkeley, the U.S. Census Bureau, and the U.S. Department of Agriculture. In a CATI system, the completed interview is scripted and then programmed so that, when executed from a computer workstation, the questions or instructions are presented to the interviewer on the computer screen, in order. The program then indicates what numeric codes or text the interviewer is allowed to enter as responses to each of the questions. When entered, the responses are stored directly into the data set for the study.

The CASES software enables the interview to be fully programmable. The software integrates both closed-ended questions and open-ended questions. The software allows interviewers to record notes along with responses to closed questions. By default, the software moves directly from one item to the next in the sequence, unless specific program commands are inserted to direct the execution path elsewhere. Different skip commands can be associated with separate responses to the same questions. For example, the interview can be directed to a separate battery of follow-up questions if the respondent answers "<1> YES" to a question on smoking cigarettes, and to an entirely different series of questions if the respondent answers "<5> NO." Commands can also be inserted between questions to direct the interview to a particular battery of questions, based on the combination of responses to two or more previously answered questions. These programming features minimize the opportunities for many errors, since inappropriate questions will not be asked and, as a result, appreciably less editing is necessary after the interview.

**Interviewers and Interviewer Training.** New interviewers received approximately 15 hours of training, including a shift of practice interviewing. Each interviewer trainee received a training manual with instructions on techniques and procedures, copies of all relevant forms, and descriptions of operations. The OSR telephone interviewing training package was developed using "General Interviewing Techniques: A Self-Instructional Workbook for Telephone and Personal Interviewer Training", by P. J. Guenzel, T. R. Berckmans, and C. F. Cannell (1983) of the Survey Research Center, Institute for Social Research, University of Michigan.

Experienced interviewers received approximately two hours of study-specific training to acquaint them with the study protocols, the interview instrument, and the objectives of the various questions. New interviewers were also given this information as a part of their training. Approximately 53 different interviewers were involved in data collection on round 69 of the State of the State Survey.

**Field Period and Respondent Selection in Household.** Interviewing began on September 10, 2014, and continued through November 26, 2014. Randomly selected telephone numbers for which a directory listing was available were sent an advance letter roughly one week prior to the time at which an initial call attempt to contact the household would be made.
In the portion of the sample that involved re-interviewing respondents from the previous SOSS, interviewers asked to speak with that person when they contacted the household. When interviewers successfully contacted a household in the new RDD portion of the sample, the study procedures required them to randomly select an adult from among those residing in the household to be the respondent. The Trohldal-Carter technique was used as the mechanism for choosing a respondent within each household.

Telephone numbers were called across times of the day and days of the week. If no contact had been made with someone at the number after a minimum of nine call attempts, the call schedule for that case was reviewed by a supervisor to see that it had been tried across a variety of time periods. If it had not, the supervisor would re-release the number for additional calling in time periods that had not been tried. If, after additional calls were made, still no contact was made, the number was retired as a non-working number. If the review of the case indicated that it had been tried at various times and days, the supervisor might finalize the case as non-working, or might release it for up to six additional tries. In the case contact was established, the number would continue to be tried until a total of 12 attempts were made or the interview was completed, the interview was refused, or the case was determined to be ineligible or incapable.

The average interview lasted approximately 24.49 minutes (standard deviation= 5.718) with a median of 24 minutes. In the case of an initial refusal, numbers were called back after eight days (although this was shortened as the end of the field period neared). Efforts were made to persuade initially reluctant respondents to complete the interview.

Completion Rate. A total of 1002 interviews were completed, 129 with landline participants re-contacted from the SOSS 67 survey, 130 with cell participants re-contacted from the SOSS 67 survey, 380 with new landline RDD participants, and 363 with new cell phone RDD participants. The overall completion rate among eligible respondents was 29.5% (28.5% in the new landline RDD segment, 21.9% in the new cell phone RDD segment, and 62.7% in the re-contact segment).

These rates are based on computation and classification coding developed by the advisory team for SOSS. Since then, the American Association of Public Opinion Research has published Standard Definitions as a guide to developing more nearly standard formulas for computing response rates, cooperation rates, refusal rates, and contact rates. Using AAPOR’s formula RR4, the response rate for SOSS 69 was 20.2%, the refusal rate (REF2) was 14.2%, the cooperation rate was 57.5%, and the contact rate was 65.5%.

Of those completing the interview, the mean number of calls required was 4.12 (4.16 among the re-contact cases, 3.85 among the new landline RDD cases, and 4.36 among the new cell phone RDD cases). Interviewers made a total of 84,578 calls to complete the 1002 interviews.

The refusal rate was 13.8%.
8. Documentation Available

The following documentation is available for this survey:

a. Methodological Report
b. Questionnaire (included in Methodological Report)
c. SPSS commands to read the ASCII data set
d. SPSS commands for weighting cases in the sample
e. Weighted Codebook

9. Data Format and Archiving

Data are available in SPSS, STATA, and Excel formats, with weight variables included.
10. Questionnaire
Before we begin, let me tell you that this interview is completely voluntary. You may choose not to participate and you may end your participation at any time without penalty. Should we come to any question that makes you feel too uncomfortable or you do not want to answer, just let me know and we can go on to the next question.

Information collected for this study will be kept confidential to the extent allowed by local, state and federal law, and no reference will be made in any oral or written report that would link you individually to this study.

This call may be recorded for quality assurance.

[red]IWER: IF THE RESPONDENT WANTS CONTACT INFORMATION FOR THE PROJECT MANAGER, THE PRINCIPAL INVESTIGATOR, OR THE IRB, THAT INFORMATION IS AVAILABLE IN THE Q BY Q WHICH CAN BE ACCESSED BY USING 'F4'[/n]
I'd like to start by asking you a few questions about how things are going for Michigan residents in general.

Would you say that you and your family living with you are better off or worse off financially than you were a year ago?

1> BETTER OFF
3> ABOUT THE SAME (R PROVIDED)
5> WORSE OFF

@  

Now looking ahead, do you think that a year from now, you and your family living with you will be better off financially or worse off financially?

1> BETTER OFF
3> ABOUT THE SAME (R PROVIDED)
5> WORSE OFF

@  

How would you rate your household's overall financial situation these days?

Would you say it is excellent, good, just fair, not so good, or poor?

1> EXCELLENT
2> GOOD
3> JUST FAIR
4> NOT SO GOOD
5> POOR

@  

During the next twelve months, do you think the rate of inflation in this country will go up, will go down, or will stay about the same as it was in the past 12 months?
IWER: IF R ASKS FOR CLARIFICATION/DEFINITION OF 'INFLATION' PLEASE RESPOND "WHATEVER IT MEANS TO YOU"

<1> GO UP
<3> GO DOWN
<5> STAY ABOUT THE SAME

<8>[commandbutton <DO NOT KNOW>]
<9>[commandbutton <REFUSED THIS QUESTION>]

@

Twelve months from now[n], do you expect the unemployment situation in this country to be [bold]better than[n], [bold]worse than[n], or [bold]about the same[n] as it was in the last 12 months?

<1> BETTER THAN
<3> WORSE THAN
<5> ABOUT THE SAME

<8>[commandbutton <DO NOT KNOW>]
<9>[commandbutton <REFUSED THIS QUESTION>]

@

Now turning to business conditions in your community, do you think that during the next twelve months[n] your community will have [bold]good times[n] financially, or [bold]bad times[n] financially?

<1> GOOD TIMES
<3> BAD TIMES
<5> NEITHER GOOD NOR BAD; MEDIocre stay the same (R provided)

<8>[commandbutton <DO NOT KNOW>]
<9>[commandbutton <REFUSED THIS QUESTION>]

@

The next couple of questions are about our elected officials.

Overall, how would you rate the way [bold]Barack Obama[n] is performing his job as [bold]President[n]?

Would you say excellent, good, fair, or poor?

<1> EXCELLENT
<2> GOOD
<3> FAIR
<4> POOR

<8> [commandbutton <DO NOT KNOW>]
<9> [commandbutton <REFUSED THIS QUESTION>]

@

How would you rate the way [bold]Rick Snyder[n] is performing his job as Michigan's [bold]Governor[n]?

Would you say excellent, good, fair, or poor?
How likely are you to vote in the election in November? It will include races for Michigan's Governor and one U.S. Senate seat, as well as local contests. Are you very likely, somewhat likely, somewhat unlikely, or very unlikely?

1. VERY LIKELY
2. SOMEWHAT LIKELY
3. NEITHER LIKELY NOR UNLIKELY (R VOLUNTEERED)
4. SOMEWHAT UNLIKELY
5. VERY UNLIKELY

[commandbutton <DO NOT KNOW>]
[commandbutton <REFUSED THIS QUESTION>]

@

In the race for Governor, if the election were held today, would you vote for Rick Snyder, the Republican; or Mark Schauer, the Democrat?

@green] IWER: 'SCHAUER' IS PRONOUNCED LIKE 'SHOWER' [@
@green] IWER: THERE ARE MULTIPLE VERSIONS OF THIS QUESTION WITH DIFFERENT ANSWER OPTIONS AND ORDER; PLEASE READ CAREFULLY[@

1. RICK SNYDER (REPUBLICAN) [goto vote2]
2. MARK SCHAUER (DEMOCRAT) [goto vote2]
3. OTHER (R VOLUNTEERED) [goto vote2]
4. UNDECIDED/DO NOT KNOW (R VOLUNTEERED)

[commandbutton <REFUSED THIS QUESTION>] [goto vote2]

@

Well, if the election were held today and you had to decide right now, which candidate would you lean toward, Rick Snyder, the Republican; or Mark Schauer, the Democrat?

@green] IWER: 'SCHAUER' IS PRONOUNCED LIKE 'SHOWER' [@
@green] IWER: THERE ARE MULTIPLE VERSIONS OF THIS QUESTION WITH DIFFERENT ANSWER OPTIONS AND ORDER; PLEASE READ CAREFULLY[@

1. RICK SNYDER (REPUBLICAN) [goto vote2]
2. MARK SCHAUER (DEMOCRAT) [goto vote2]
3. OTHER (R VOLUNTEERED) [goto vote2]
4. UNDECIDED/DO NOT KNOW (R VOLUNTEERED)

[commandbutton <REFUSED THIS QUESTION>] [goto vote2]
In the race for Governor, if the election were held today, would you vote for Mark Schauer, the Democrat; or Rick Snyder, the Republican?

[green]IWER: 'SCHAUER' IS PRONOUNCED LIKE 'SHOWER'[n]

[red]IWER: THERE ARE MULTIPLE VERSIONS OF THIS QUESTION WITH DIFFERENT ANSWER OPTIONS AND ORDER; PLEASE READ CAREFULLY[n]

<2> MARK SCHAUER (DEMOCRAT) [goto vote2]

Students are often given the grades A, B, C, D, and FAIL to denote the quality of their work. Suppose the public schools themselves in Michigan were graded in the same way. What grade would you give the public schools in Michigan: A, B, C, D, or FAIL?

<1> A
<2> B
<3> C
<4> D
<6> FAIL
Using the same scale, what grade would you give the teachers in Michigan?

1. A  
2. B  
3. C  
4. D  
6. FAIL  

How much, if anything, have you heard about the new national standards for teaching reading, writing, and math in grades K through 12, known as the Common Core State Standards? A great deal, a fair amount, only a little, or nothing at all?

1. A GREAT DEAL  
2. A FAIR AMOUNT  
3. ONLY A LITTLE  
4. NOTHING AT ALL

Do you favor or oppose having teachers in Michigan use the Common Core State Standards to guide what they teach?

1. FAVOR  
2. OPPOSE  
8. [DO NOT KNOW]  
9. [REFUSED THIS QUESTION]

Why do you favor the Common Core State Standards for Michigan?

1. WILL IMPROVE THE QUALITY OF EDUCATION  
2. WILL MAKE OUR SCHOOLS MORE COMPETITIVE WITH OTHER COUNTRIES  
3. WILL MAKE OUR SCHOOLS MORE CONSISTENT WITH OTHER STATES  
4. WILL RAISE STANDARDS  
5. WILL YIELD BETTER STUDENT TESTS  
6. WILL PREPARE STUDENTS FOR COLLEGE/CAREERS

0 OTHER: SPECIFY

a. GREATER CONSISTENCY/COMMON STANDARDS
Why do you oppose the Common Core State Standards for Michigan?

>edu11<

How do you feel about the current level of oversight and accountability for
charter schools? There is too much, there is not enough, or it's about right?

<1> NOT ENOUGH
<2> IT'S ABOUT RIGHT
<3> TOO MUCH
When compared with other states, a higher percentage of Michigan charter schools are run by for-profit management companies. Do you favor or oppose this feature of Michigan's system of charter schools?

1. FAVOR
2. OPPOSE
3. NO OPINION/NEITHER FAVOR NOR OPPOSE

Why type of school does your youngest school aged child attend?

[green]IWER: IF R ASKS WHAT 'TYPE' MEANS, RESPOND 'IS IT A PRIVATE OR PUBLIC OR HOMESCHOOL?'

1. PUBLIC SCHOOL (INCLUDE MAGNET, CHARTER, AND SCHOOL OF CHOICE)
2. PRIVATE SCHOOL
3. HOME SCHOOL
4. CHILDREN NOT SCHOOL AGED YET

Is the public school your neighborhood school, another school in the district, a school outside your district or a charter school?

1. NEIGHBORHOOD PUBLIC SCHOOL
2. ANOTHER PUBLIC SCHOOL IN DISTRICT
3. PUBLIC SCHOOL OUTSIDE DISTRICT
4. CHARTER SCHOOL

Thank you for answering our questions. In a couple of months, we'd like to re-contact some of the people we've spoken with for another interview either over the phone or on the web. Would you be willing to participate again in a couple of months?

1. YES
5. NO
Do you have an email address so that we may contact you to do the survey online instead of by phone?

Your email address will be kept confidential and will only be used for research purposes.

<1> YES
<3> NO, DO NOT WANT TO GIVE EMAIL ADDRESS OUT[goto rname]
<5> NO, HAVE NO EMAIL[goto rname]

<8>[commandbutton <DO NOT KNOW>][goto rname]
<9>[commandbutton <REFUSED THIS QUESTION>][goto rname]

What is your email address?

EMAIL ADDRESS: @

[0][allow 40]

Can I get your first name so we know who to ask for when we re-contact you?

FIRST NAME: @

[0][allow 20]
