About the Correlates of State Policy Project

The [Correlates of State Policy Project](#), an initiative of the Institute for Public Policy and Social Research (IPPSR) at Michigan State University, aims to compile, disseminate, and encourage the use of quantitative data relevant to U.S. state policy research, tracking differences across and changes over time in the 50 states (+ DC). In keeping with the mission of IPPSR, this project documents, updates, and distributes various datasets relevant to research on pressing public policy issues. IPPSR is committed to research transparency, replication, and data reliability. These cross-state and cross-time datasets are free and publicly available for academics, policy analysts, students, policymakers, and the research community. We welcome [notification](#) of any errors, comments, and contributions of additional datasets. This dataset, CSPP, is our largest and contains over 2,000 variables from hundreds of sources.

Resources

- The data is available to download here: <http://ippsr.msu.edu/public-policy/correlates-state-policy>
- We created an accompanying [R package](#) and [web application](#) to simplify the use of this data. Both tools allow users to easily access, search (by keyword or category), subset, and visualize the data. They can both also export plain text and BIBTEX citations for the specific variables that you use.
- An accompanying tabular codebook (.csv file) contains the information in this document along with both plain text and BIBTEX citations for each of the variables in the dataset. The [R package](#) and [web application](#) simplify interacting with it (both can easily subset the codebook to include relevant variables only), but it is available for download for your use here: <http://ippsr.msu.edu/public-policy/correlates-state-policy>

About the Dataset and Variables

The Correlates of State Policy Project (CSPP) dataset includes over 3000 variables, with observations across the 50 U.S. states (+ DC) and across time (coverage varies across 1900–2020; specific date ranges for each variable are provided below). These variables represent policy outputs or political, social, or economic factors that may influence policy differences. The codebook includes the variable name, a short description of the variable, the variable time frame, a longer description of the variable, and the variable source(s) and notes.

Notes and Suggested Citation

This aggregated dataset is only possible because many scholars and students have spent countless hours creating, collecting, cleaning, and making data publicly available. Variable names, descriptions, dates, and notes are generally copied directly from the source. For complete information about the variable, such as how it was collected or calculated, see the original source. Attribution for a variable should be given to the named source(s). However, we would also appreciate recognition. A suggested citation follows:

Examples of Variables Included in Each Category

1. **Demographics and Population:** State population totals · population density · population of selected age groups (under 5 years old, 5–17 years old, 18–24 years old, etc.) · female population · male population · religion · race and ethnicity · foreign-born population · immigration policy
2. **Economic and Fiscal Policy:** Personal income · state minimum wage · per capita income · state consumer price index · gross state product · total state debt · total state revenue · total state expenditures · budget surplus estimates · total debt outstanding as percent of GDP · total revenue outstanding as percent of GDP · state tax capacity · state assets · state liabilities · fiscal condition index · tax credits · income and sales tax rates · women's earnings as a percentage of men's earnings · unemployment rate · median household income · lottery ticket sales · poverty rate · AFDC/TANF recipients · food stamps/SNAP recipients · welfare spending

3. **Government:** State term limits · legislative session length · procedures for administrative regulations · previous governors and their experience · party of governor · female elected officials · number of local governments · state chamber ideological measures (medians, distance between party medians in each chamber, party heterogeneity, etc.) · legislative seats held by each party · state legislative professionalism · state high court professionalism · corruption convictions · year of statehood · various “freedom” indices: economic freedom, personal freedom, gun control freedom, alcohol freedom, civil liberties freedom, labor market freedom, etc. · membership in interstate compacts
4. **Elections:** Voter ID and registration requirements · voting-eligible population turnout rate · election years · proportion of democratic state representatives and senators · proportion of two-party vote for Democratic gubernatorial candidate · measures of state electoral competitiveness · campaign finance regulations · interest groups by sector
5. **Policy Scores and Public Opinion:** Mean liberalism scores (economic and social) · state policy liberalism scores · policy innovativeness scores · ideology and party identification scores · policy mood · political knowledge · social capital
6. **Criminal Justice and the Legal System:** Domestic violence laws · treatment of inmates · prohibition of harassment/stalking · procedures for and resolution of private disputes and civil cases · DNA testing · identity theft · death penalty reform · motor vehicle theft rate · property crime rate · violent crime rate · gun background checks · marriage license requirements · child custody and child support laws · no-fault divorce
7. **Education:** College placement exams · home-schooling policies · teacher certification · regulation of private schools · state education spending · percent of state population with a high school diploma · average school attendance rate · percent dropout rate · instruction expenses per student · pupil to teacher ratio · average tuition rates · fourth grade math and reading scores
8. **Healthcare and Health Insurance:** Rights for the terminally ill · health insurance benefit mandates · health insurance mandated coverage for dependents · newborn screening · coverage for seniors’ prescription drugs · total state population with government insurance · health spending per capita · infant mortality rate · Medicaid enrollment
9. **Welfare Policy:** State adoption of Medicaid program · CHIP eligibility levels · AFDC benefits for average family · TANF eligibility and benefits
10. **Rights and Anti-Discrimination Protections:** Law prohibiting hiring discrimination on the basis of gender · Equal Rights Amendment ratified · abortion and contraception policies (access, insurance coverage, parental consent, TRAP laws, fetal personhood, etc.) · laws banning hate crimes · same-sex marriage · laws prohibiting discrimination in employment, housing, public accommodations · fair housing · affirmative action ban
11. **Environment:** Environmental building standards · tax credits for renewable energy · bottle bill · e-waste recycling program · cap on greenhouse gas emissions · endangered species regulations · commercial sector energy consumption · residential sector energy price · total CO2 emissions
12. **Drug and Alcohol Policy:** Punishment for DUIs · restrictions on alcohol sales · smoking bans · medical marijuana permitted · cigarette taxes · registration of beer kegs · zero-tolerance laws for underage drinking · Internet gambling · casinos allowed · state lottery
13. **Gun Control:** Concealed carry laws · assault weapons ban · background checks · waiting period for gun purchases · child-access prevention laws · mandatory reporting of firearm thefts
14. **Labor:** State minimum wage rate · fair employment laws · workers’ compensation · unemployment compensation · right-to-work law · short-term disability insurance program
15. **Transportation:** Seatbelt laws · motorcycle and bicycle helmet laws · blood-alcohol-content laws for drivers · uninsured/underinsured coverage required · ban on handheld cellphones for all drivers · driver’s license renewal cycle
16. **Regulatory Policy:** Licensing requirements for various occupations · estate planning and administration, wills, trusts · abandonment of property · regulation of mortgages and leases · eminent domain · sale of fireworks permitted · lemon laws · consumer protections · regulation of sales and transactions/transfers

Note About Coding of Policy Outputs Regarding the “policy output” variables, which typically indicate whether a given policy has been adopted (yes/no, 0/1): Many of these variables were originally presented in long format, with the data indicating the specific year that a policy was adopted by each state. The variables have been reshaped to wide format throughout the Correlates dataset, so a value of 0 indicates the years that a policy was not or has not been adopted, and a 1 indicates the years that a policy was or has been adopted in each state.

Panel Variables The CSPP dataset includes the following panel variables:

- State Name
- State Abbreviation
- State Code (FIPS)
- State Code (ICPSR)
- State Number (Alphabetical)
- Year

To maximize consistency of the definition of "urban" across Census years, Census respondents were generally coded as living in urban areas if the Census "metro" variable indicated that they were living in a "metro area." The "metro" variable is unavailable in 1970 and 1990 Census data; in these cases, I used the closely related "metarea" variable. As with most coding of urban residence in the United States, this coding is generous: for example, counties that contain more than 10,000 people are considered "urban" by this coding, and the entire state of New Jersey is coded as "urban" from 2000 to the present. See http://usa.ipums.org/usa-action/variables/alphabetical?id=M for more information about the definitions of the "metro" and "metarea" variables	Bullock, John G. firms_susb	1988-2018	Total number of firms. A firm is a business organization consisting of one or more domestic establishments in the same geographic area and industry that were specified under common ownership or control. The firm and the establishment are the same for single-establishment firms. For each multi-establishment firm, establishments in the same industry within a geographic area will be counted as one firm; the firm employment and annual payroll are summed from the associated establishments. NOTE: The Correlates team collected the data for this variable directly from the Census's website and prepared it for inclusion to the dataset. The data should be the same as the 'firms' variable also in the CSPP dataset, but differences exist. We sourced 'firms' from Stateminder (now defunct) and retain it in CSPP for completeness. This discontinuity results from many sources, including differences in source data and different estimation methodologies. In addition, the NAICS-based GDP-by-state estimates are consistent with U.S. gross domestic product (GDP) while the SIC-based GDP-by-state estimates are consistent with U.S. gross domestic income (GDI). This data discontinuity may affect both the levels and the growth rates of the GDP-by-state estimates. NAICS industry defined data was used for 1997.

U.S. Bureau of Labor Statistics. 2016. 'Women's Earnings as a Percent of Men's Earnings.' Accessed at: http://www.bls.gov/cps/earnings.htm#demographics . Originally provided by Stateminder: A data visualization project from Georgetown University. http://stateminder.org/ (no longer accessible online) Note: In general, the sampling error for the state estimates is considerably larger than it is for the national estimates; thus, comparisons of state estimates should be made with caution. Data measure usual hourly and weekly earnings of wage and salary workers. All self-employed persons are excluded, regardless of whether their businesses are incorporated. Data represent earnings before taxes and other deductions and include any overtime pay, commissions, or tips usually received. The earnings data are collected from one-fourth of the CPS total sample of approximately 60,000 households.

foodstampben	2002-2011	Average monthly food stamp benefits per person in a fiscal year. Food stamps are defined as a federal entitlement program providing credit to purchase food items for people earning less than 130% of the federal poverty line. The federal fiscal year runs from October 1 through September 30. (Avg. dollars per participant.) The number of persons participating is reported monthly. Annual averages are the sums divided by twelve.	Kaiser Family Organization. 2016. 'Average Monthly Food Stamp Benefits per Participant.' Accessed at: http://kff.org/other/state-indicator/avg-monthly-food-stamp-benefits/ . Originally provided by Stateminder: A data visualization project from Georgetown University. http://stateminder.org/ (no longer accessible online) Note: In 2008, the 'Food Stamp' program was re-named SNAP: Supplemental Nutrition Assistance Program. The name change reflects the program's focus on nutrition and putting healthy food within reach for low income households. 2011 data are preliminary. Generally SNAP households must have monthly gross income less than 130 percent of the Federal poverty guidelines (\$2,422 for a family of four in fiscal year 2012), monthly net income less than 100 percent of the poverty guidelines, and assets of less than \$2,000. SNAP clients can buy all foods carrying a nutrition facts label and intended to be eaten at home. Some items, such as alcoholic beverages, cigarettes, vitamins or medicines and pet foods are not allowed.

res_energy_price	1970-2017	The variable is the state-level total energy average price estimator that considers the ratio of the money directly spent by consumers to purchase energy and the use of energy as a source of heat or power. See calculation method and notes for additional information. (In dollars per million BTU)	Provided by the U.S. Energy Information Administration: https://www.eia.gov/state/seds/seds-data-complete.php?sid=US Some data originally provided by Stateminder: A data visualization project from Georgetown University. www.stateminder.org (no longer accessible online) Notes: Total energy average price is derived by dividing the total energy total expenditures in the residential sector by the total energy consumed by the residential sector, across each state, and multiplying the result by a thousand. Data is adjusted for process fuel, intermediate products, and fuels with no direct cost. Residential sector is defined as an energy-consuming sector that consists of living quarters for private households. Energy is defined as the capacity for doing work as measured by the capability of doing work (potential energy) or the conversion of this capability to motion (kinetic energy).

This doesn't include KY after it switched to even-year elections for the state legislature.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
biennium	1925-2016	First year of the biennium a year belongs to. Bienniums are thought to start in the year after an election in (often) even-numbered years. For example, 1971-1972 is the biennium in OR after the 1970 election. Then '1971' would appear in both 1971 and 1972 for OR. This includes KY after it switched to even-year elections for the state legislature.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
biennium_b	1925-2016	First year of the biennium a year belongs to. Bienniums are thought to start in the year after an election in (often) even numbered years. For example, 1971-1972 is the biennium in OR after the 1970 election. Then '1971' would appear in both 1971 and 1972 for OR. This considers KY a 'normal state' after it switched to even-year elections for the state legislature.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
biennium_first_year	1925-2016	Dummy variable: first year of a biennium. Note: these bienniums are set up in a way that defines the year after the election as the first year of the biennium. This is based off of biennium_b, not biennium_b.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
biennium_second_year	1925-2016	Dummy variable: second year of a biennium. Note: these bienniums are set up in a way that defines the year after the election as the first year of the biennium. This is based off of biennium_b, not biennium_b.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1

gub_election	1936-2015	Dummy: 1 = gubernatorial election in that year. Blank = none. This puts the election year into the calendar year it was held in.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
gub_election_re gime	1936-2015	Calendar year in which the next gubernatorial election will be held. In an election year, this variable will be equal to 'year.'	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
gov_midyear_cha nge_date	1900-2019	Date of mid-year change in governors, if the governor left office at a 'non- standard' time, except for LA. 'Non-standard' means because of death, resignation, or impeachment.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1

budget_pass2011_04_20	1956-2010	Dummy: 1 = budget passed in this year.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
when_leg_met2011_04_13	1900-2019	Dates legislature met. Only input if mid-year change in governor. Incomplete.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
gov_midyear_chnge_b	1961-2010	1 = governor changes mid-year. Mid-year for this variable means that the governor came in before the November election, or when a November election could have been in the case of a non-election year. Note non-standard election dates for Louisiana, and how these influence decisions specified in gov_midyear_change_b_note. 0 = else.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
gov_midyear_chnge_b_note	1900-2019	Note about gov_midyear_change_b	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
new_gov_b	1961-2011	A new governor has come into office starting in the year marked with a one. This is marked '1' in the year after a November election (i.e., if a new governor was elected in 1984, 1985 is coded '1'). If there was a mid-year switch, the year of the switch is coded with a '1,' except if the switch comes after election time (early November), in which case this variable is coded '1' in the next calendar year. If a new governor comes into office that year, they are still coded as new even if they were a past governor.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1

past_gov	1956, 1960-2010	Governor has served in the past, with someone serving in between. 1= served once in the past with someone else in between. Only coded for the first year of a gubernatorial administration (i.e., new_gov_b = 1). 2 = served twice in the past with two periods in between. Only coded for the first year of a gubernatorial administration (i.e., new_gov_b = 1). 3 = judgment call, see note in past_gov_note. Blank = either missing, or didn't serve in the past.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
past_gov_note	1900-2019	Note about past_gov.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
gov_midyear_cha_nge_c	1961-2010	1 = governor changes mid-year, from the perspective of the budget. If the new governor comes in before the budget is passed, then this gets a '1,' '0' if after the budget is passed. If the governor comes in very early in the year, before the session starts, or if only a few days were held, this gets a score of '0.' 0 = else. 2 = missing data. Note: this variable is identical to gov_midyear_change_b, but altered from 1 to 0 when appropriate because of when the budget passes. Explanations for these changes can be found in the variable gov_midyear_change_c_note.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1

new_gov_c	1955-2010	Note: this variable is identical to new_gov_b, but altered from 1 to 0 when appropriate because of mid-year changes in the governor in light of when the budget passes. If a budget didn't pass in the first year that a governor came in, the case in the next year is coded '1' instead. 2 = missing data	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
new_gov_d	1961-2010	Dummy: 1 = new governor this year. Cases where an incoming governor served in the past aren't included in scores of '1.' 0 = else. Note: this variable is identical to new_gov_c, but altered from 1 to 0 when appropriate because the new governor has served in the past. 2 = missing data	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1

fracleg_old_variable	1956, 1960, 1963-1965, 1968, 1972, 1973, 1977, 1978, 1980, 1984, 1988, 1991, 1993, 1997, 2001	Fraction of days when the legislature was in session that the governor serving in the earlier part of the year was in office. Incomplete variable	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1

years_served	1955-2010	Number of years that the governor has served. The variable indicates their experience at the beginning of the year. If a governor came back to office, their counter began where it left off before. If someone came in mid-year (not in Jan or Dec) the governor that was in office when the budget passed was used for the figure. If someone came in at some fraction of the year (i.e., July 1st) they were given the credit of a fraction of their experience (i.e., .5) in the next year they served.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
budgets_overseen	1955-2010	Number of budgets that the governor has overseen. If a governor leaves and comes back, the budgets they oversaw in the past are also counted. In the first year they oversee a budget, they get a code of '0.'	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
years_served_budgets_overseen_note	1900-2019	Notes about the number of years served and budgets_overseen.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
term_length	1956-2004	Number of years in governor's term (means that in that year the governor is having that type of term, in length).	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
years_left_in_term	1956-2004	Number of years left in the governor's term.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
limit_exists	1936-2010	A gubernatorial term limit exists by law at this time, no matter how many terms the present governor has served. 1 = yes, 0 = no	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
limit_type	1936-2010	Type of term limit. 0 = there is no term limit. 1 = there is a one-term limit. 2 = there is a two-term limit. 3 = there is a three-term limit. This is from the data file 'GovTermLimits.'	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1 Sources for 1997 to 2002; Book of the States, used further research (noted in source file file) in the case of ID and MA because they had changes to their laws.

term_limit_length_uncertainty	1936-2010	0 = term limit is known because it was looked up from documents, etc. 1 = assumption was made that term limit in an earlier year was the same as the earliest year term limit law was known. Note: I did check to see if there were inconsistencies between the coding of 'term_length' and which governors were in office (for example, if there was a two-term governor in a state I coded as having a one-term term limit).	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
years_left_before_limit	1936-2011	Number of years left before the governor's term limit. This takes into account how states individually deal with partial terms, governors that come back after taking time off, and transition rules. The numerous sources for this information are in the codebook 'GovTermLimits-Notes' under variable trli0005.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1 Note: Could not always find out if a state had transition rules that applied to the sitting governor. In these cases, author merely assumed that a governor who was sitting in a state with a one term term limit when a constitutional amendment passed creating a two term term limit would be eligible for a second term. If a governor was sitting in a state with no term limits, when a constitutional amendment passed that created a two term term limit author assumed that the counter would start when the constitutional amendment passed. Some of the state specific notes for this variable may not appear below, but in the document 'GovTermLimits-PrimaryDocuments.' If the term limit in NC in 1997 was an absolute limit, then James B. Hunt could have never served a second time. Therefore, the limit is on consecutive terms, and his clock starts from the beginning.

years_left_before_limit_uncertain	1960-2010	1 = some uncertainty about the number of years left before a term limit because I'm unsure of how partial terms count toward the limit.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
lame_duck_last_term	1936-2010	Governor is in the last term before his term limit, i.e., he or she is a lame duck. 1 = governor is a lame duck. 0 = governor is not a lame duck.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
lame_duck_last_year	1936-2010	Dummy: 1 = governor is in their last year before a term limit. 0 = else.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
lame_duck_last_2nd_to_last_year	1936-2010	Dummy: 1 = governor is in their second to last year before a term limit. 0 = else.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1

femgov	1956-2007	Dummy: 1 = female, 0 = male. This was coded based on the first name of the governor. If there was doubt, an internet search was done to ascertain their gender. One source: http://www.guide2womenleaders.com/Governors1920.htm	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1

stateleg	1959-2007	Dummy: Member served in the state legislature. 1 = yes, 0 = no. A search was done through supplement #1 to the Book of States 12 years before their arrival to the governor's office. They may have been in the state legislature before that time, but they would receive a score of '0' if so. For consistency, when governors were found in state legislatures before the twelve-year cutoff, and not after, they did not receive a code of '1.' legexper	1959-2007	Dummy: 1 = members served in either the state legislature or U.S. Congress. 0 = else. Computed from stateleg and congmemb. Gives fractions sometimes when there was a mid-year switch in governor.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
party_midyear_change	1960-2010	Year had governors of two different parties in it. A year doesn't include normal transitions (that obviously are rarely on January 1st), or abnormal transition that occur early in the year. If it happened late enough in the year (after a November election would have been), that's not considered a mid-year change. Dummy variable: 1 = yes, blank = no. This variable appears to be incomplete.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
party_midyear_change_direction	1960, 1963, 1988, 1991, 1993, 1996	-1 = change was from Democrat to Republican. 1 = change was from Republican to Democrat. Blank = no change.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
govparty_a	1937-2011	Party of the governor; 0 = Republican, 1 = Democrat, .5 = non-major party governor. When the party of the governor changes mid-year (eight cases), the fraction of the year with a Democratic governor is put in as a value.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1 Notes: This is govparty from StateElections_PartisanBalance1937to2011_2011_03_22.xls. However, years are put in 'government style.' For example, if a Democrat replaces a Republican in the 1988 election, 'R' goes into 1988, and 'D' goes into 1989. party_midbiennium_change	1936-2012	Biennium had governors of two different parties in it. Dummy variable: 1 = yes, blank = no.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
party_midbiennium_change_direction	1959, 1960, 1963, 1988, 1991, 1993, 1996, 2003, 2004, 2010, 2011	-1 = change was from Democrat to Republican. 1 = change was from Republican to Democrat. Blank = no change. This is put into the year of the biennium that saw the change if this is a mid-year change also. This is put into both years of the biennium if the change took place from the first year of the biennium to the second.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
govparty_b	1937-2011	This is the same as govparty_a, except that when there is a mid-year switch in the party of the governor, the party of the governor during the November election is used.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
govparty_b_2	1937-2011	Same as govparty_b, except recoded. Democrat = 1, Republican = -1, non-major party governor = 0.	Klarner, Carl, 2013, 'Governors Dataset', https://doi.org/10.7910/DVN/PQ0Y1N , Harvard Dataverse, V1
state_midterm_penalty	1937-2011	0 = gubernatorial election in that year, or no gubernatorial election, and a non-major party governor in office during the election. 1 = no gubernatorial election, and a Democratic governor in office. -1 = no gubernatorial election, and a Republican governor in office. edufree	2001, 2007, 2009, 2011	<p>Within education policy, mandatory licensure of private school teachers appears to be the most destructive regulation, and it alone constitutes slightly more than half of the overall educational freedom weight. Other variables are years of mandatory schooling, extent of private school curriculum control, tax credits and deductions for private or home schools (for parents or as contributions to scholarship funds), mandatory government approval of new private schools, home school curriculum control, standardized testing or other evaluation requirements for home schools, extent of home school recordkeeping requirements, teacher qualifications for home schools, an index of home school notification requirements, mandatory kindergarten attendance, the existence of a statute explicitly permitting homeschooling, and mandatory registration of private schools.</p>	<p>Mercatus Center. 2016. While these policies receive 'constitutional weights' boosting them by a factor of 10 because of their First Amendment implications, they receive low weights even so because there is not much evidence that contribution limits reduce private actors' involvement in politics, unless the limits are extremely low (and Vermont's extremely low limits were struck down by the US Supreme Court in 2006).</p>	<p>Mercatus Center. 2016. forfree	2001, 2007, 2009, 2011	The calculation for the ease of civil asset forfeiture is based on results reported in the Institute for Justice study Policing for Profit. This index basically reflects the extent to which a state's tight asset forfeiture rules encourage revenue-sharing with the Department of Justice. Tight rules are indeed better, since the government should not take private property simply because it was allegedly used in a crime or allegedly constitutes proceeds of a crime, unless the owner of the property is found culpable in a court of law and the seizure is used to compensate victims. But as the Institute for Justice study found, tight rules simply encourage forfeiture by the federal government.	Mercatus Center. 2016. 'Freedom in the 50 States.' healthfree	2001, 2007, 2009, 2011	Health insurance includes state-level health insurance mandates, small group rate review, guaranteed issue regulations, individual market community rating, mandated direct access to providers, individual market rate review, and a host of lower-impact regulations on managed care organizations (HMOs). State-level health insurance mandates, the second most significant variable in this category at 1.7 percent of the freedom index, impose direct costs of nearly \$9 billion a year. marrfree	2001, 2007, 2009, 2011	Almost all the weight of the marriage freedom category is tied to the availability of same-sex partnerships, both civil unions and marriage. The remainder is tied to waiting periods and blood test requirements. States that prohibit same-sex couples from entering private contracts that provide the benefits of marriage (whether termed 'marriages' or 'civil unions') take away an important contract right from these couples. McDonald, Michael P. United States Election Project. Turnout 1980-2012. http://www.electproject.org/ Originally provided by Stateminder: A data visualization project from Georgetown University. www.stateminder.org (no longer accessible online) Notes: The number of ineligible felons depends on state law. Some states permanently disfranchise felons and a few let even prisoners vote. Statistics drawn from various Department of Justice reports which detail the prison, probation, and parole population of the United States are matched with these state laws to estimate the number of ineligible felons. The Department of Justice Bureau, Office of Justice Statistics releases numbers from Jan. 1 through Dec. 31 for a given year. Author uses the most approximate Jan. 1 values, where available, since these include revised Dec. 31 data from the previous year. Author assumes all Prisoners and Parolees are felons, and half of Probationers are felons (this estimate is drawn from DOJ reports; starting in 2011, DOJ reports the number of persons on probation who are felons). A blank or zero indicates the category of felons is allowed to vote in that state. For the United States totals, author includes persons in the federal corrections system.

McDonald, Michael P. United States Election Project. Turnout 1980-2012. http://www.electproject.org/ Originally provided by Stateminder: A data visualization project from Georgetown University. www.stateminder.org (no longer accessible online) Notes: VEP Highest Office Turnout Rate = (Voted for Highest Office) / (Voting-Eligible Population Total) (recommended statistic). The Vote for Highest Office is the traditional reported number of people who voted in a given election. In presidential election years, the vote for highest office is simply the presidential vote. In a non-presidential election year, the vote for highest office is the largest vote total for a statewide office such as governor or US Senator. When no statewide office is on the ballot, the sum of the congressional races is used instead. In 2006, the methodology was changed slightly to use the sum of the congressional races if they exceeded a statewide office, as occurred with Indiana's uncompetitive US Senate race.

hvd1_winper_4yr	1971-2011	Average percent that winning candidates got in this year's election (of the total vote), and in the elections whose values were put in the three calendar years prior to that. In <i>Politics in the American States</i> , 3rd ed., edited by Herbert Jacob and Kenneth Vines. Boston, MA: Little, Brown & Co. Klarner, Carl, 2013, 'Other Scholars' Competitiveness Measures', https://doi.org/10.7910/DVN/QSDYLH , Harvard Dataverse, V1 Notes: for an even-year, in an even-year election state with all of a chamber's seats up, this would give one-fourth weight to the current election, one-half weight to the last election, and one-fourth weight to the second to last election. For an odd year in such a state, half weight would be given to the election held last year, and half weight would be given to the election before that. WARNING: users can drop the even years in even year states if they don't like the one-fourth/one-half/one-fourth weighting referred to above. For states with four-year election cycles, like Alabama, users might consider only keeping the values from three years after the calendar year of the election. Candidates in FFA-MMDs have their % multiplied by the number of seats in the FFA-MMD. After computing this quantity for both chambers, those two quantities are averaged.
