This program design leverages grassroots nonprofit and advocacy organizations, and includes a plan to: Individuals representing the grassroots organizations are referred to as resource navigators, who:

- JumpStart targets Detroit residents who are in need of job training or work experience and traditional employment.
- JumpStart targets Detroit residents and individuals who have been unemployed for at least 24 weeks. Participates...
‘Negative economic impacts’

Across Michigan, the largest share of federal funding – $2.2 billion, has so far been earmarked for projects to address “negative economic impacts” of the pandemic on households, small businesses and nonprofits.

Of that, about $1 billion has been “obligated” through the end of 2022, and $716 million had been spent.

The plans include $3.8 million for home improvements in Saginaw, $8.6 million to provide Flint residents with a $300 water bill credit — the equivalent of roughly three months of free water — and $88 million for blight remediation in Detroit.

Guaranteed Basic Income

In Ann Arbor, city officials decided to use $1.6 million of the city’s $24 million in fiscal recovery funding to create what will be the state’s first guaranteed basic income program.

For two years, the city will provide 100 low-income families with a monthly $500 check — no strings attached.

City Council member Linh Song proposed the pilot program last spring as she

### Michigan slow to spend COVID funds

Michigan and its 68 largest communities (which report data quarterly) received a combined $9.9 billion in federal recovery funds but are only beginning to spend that money. Here are the allocations and actual spending to date.

‘Micro-forests’

The state and large local governments have so far announced plans to use $1.4 billion in federal stimulus funds to replace revenue lost during the COVID-19 pandemic and provide general government services, including $1.1 billion already spent.

The broad spending category, as defined by the federal government, allows spending on a wide array of projects.

Sterling Heights is spending $1 million of its $19.8 million in federal stimulus funds to create a series of "micro-forests" by planting trees throughout the city.

Locations could include downtown, public parks, corporate campuses, industrial areas and "really, anywhere there is 1,000 square feet of vacant land," officials said in a federal report.

The project, the city added, "is justified by the tremendous environmental benefits derived from a forest, including cleaner air, a natural water filtration system, a natural air conditioner, a flood mitigation system, a natural habitat for all forms of life, a natural recreational amenity for people seeking peace and quiet."

Sterling Heights is a dense community that is "pretty much fully built out," Mayor Michael Taylor told Bridge. "Every nook and cranny of the community continues to get developed. But as developers come in, they're clearing trees."

Replacing trees by planting micro-forests will help the city meet sustainability goals and increase quality of life for residents, Taylor said. "And it's great for the environment."

A Micro-Forest is an urban sanctuary—a dense pocket of vegetation in the city or the suburbs. It contains trees, shrubs, climbers, and groundcovers densely planted to create a mini-ecosystem that has a cooling effect and dramatically improves the amenity of the area. Micro-Forests are being planted in downtowns, public parks, corporate campuses, industrial parks, and in backyards, really, anywhere there is 1,000 square feet of vacant land. This growing trend is justified by the tremendous environmental benefits derived from a forest, including cleaner air, a natural water filtration system, a natural air conditioner, a flood mitigation system, a natural habitat for all forms of life, a natural recreational amenity for people seeking peace and quiet. In just three years, a Micro-Forest is self-sustaining and requires no further cultivation. In ten years, Sterling Heights will have restored a natural asset that will pay huge dividends for the generations of residents that will follow.
Government jobs, premium pay and lost revenue

The state and local governments are so far planning to use a relatively small portion of their federal recovery funds to plug holes in their own budgets or staffs, including $321 million already spent to make up for lost revenue, $256 million earmarked to hire or retain employees and $24 million to provide premium pay to workers who stayed on the job during the pandemic.

Genesee County was the largest spender on this front, using $7 million to provide bonus pay to more than 1,000 government employees — an average of about $6,500 per county worker.

County government offices closed “for a brief period of time” during the COVID-19 pandemic but quickly re-opened to serve the public, Genesee officials said in a federal spending report.

Employees who returned for in-person work were "an integral part" of keeping the county operational, developing COVID response plans, delivering meals to home-bound residents and helping schedule and administer vaccines, the county added.

"The on-site work of these positions were key to keep the county functioning during this timeframe and there were additional risks for these staff by being in-person in contact with others."
Digging up lead pipes

Heading into 2023, the state of Michigan and its largest local governments had finalized plans to use a combined $1.4 billion in federal recovery funding for infrastructure improvements, according to federal reports.

But only $25 million had been spent.

Much of the money has been set aside for water infrastructure projects, including about $1 billion the state budgeted for new drinking and clean water revolving funds that will be able to loan money to local governments for related projects.

The state also used $92 million to help Detroit and Benton Harbor tear out and replace underground lead service lines.

Other communities including Bay City ($6 million) are using their own federal funds to replace those pipes, as required by 2040 under a rule former Gov. Rick Snyder implemented in the wake of the Flint contamination crisis.

It’s a huge undertaking: As of 2021, officials estimated there were still more than 400,000 active lead water lines in communities across the state, posing a potential risk to public health.

"You do tend to see people doing projects that maybe they were planning to do anyway, so they're just using this money to pay for a few miles of road or to fix some lead service lines," Scorsone said. "And that's good. They free up money for other things."
Public health and gun violence

The state and local governments had set aside $788 million in federal recovery dollars for public health initiatives through the end of 2022, and spent about $200 million of that.

Much of that money is intended for direct responses to the pandemic, including a combined $139 million for equipment at nursing homes and other congregate settings. At least two communities -- Saginaw and Lenawee County -- used funding to incentivize government employees to get COVID-19 vaccines.

But local governments also plan to use the stimulus funds to address other public health issues exacerbated by the pandemic, including $20 million for mental health efforts in Oakland County and nearly $8 million for a gun violence reduction plan in Detroit.

Routinely ranked one of the most violent cities in the nation, Detroit plans to buy two new mobile police towers for community events, 75 new vehicle recognition cameras at high-crime intersections and 50 new vehicles for detectives to use during investigations.

The project aims to "reduce gun violence in the city by increasing surveillance capabilities and increasing resources to support fast response to incidents," Detroit said in a recovery fund plan filed with the federal government.

It's part of a larger effort to support "a resilient city with universally vibrant, safe, healthy and beautiful neighborhoods, providing equitable and inclusionary access to economic mobility and social prosperity," officials said.

Gun Violence Reduction Plan

Project Identification Number: 851403
Funding Amount: $7,647,280
Project Expenditure Category: EC 1.1: Public Health – Community Violence Interventions

Project Overview

Detroit intends to use American Rescue Plan Act of 2021 (ARPA) funds to increase public safety through reducing gun violence in the city. The Gun Violence Reduction Plan will employ three strategies in the efforts of gun violence reduction:

- **Mobile Towers.** Purchase two mobile towers to monitor large crowds and have increased Detroit Police Department (DPD) presence during events. These towers are mobile and therefore can be used during any large community events to reduce gun violence.

- **Vehicle Recognition Cameras.** Expand Vehicle Recognition Cameras to 75 additional intersections in the highest violent crime areas. The planned intersections are detailed below.

- **Investigative Vehicle Purchase.** Purchase 50 investigative vehicles with gas and maintenance to allow detectives to respond to scenes, even while off-duty. This will serve any individual who is a victim of a crime. In addition, this will fund a three-year commitment of a Fleet Analyst, who will oversee all Department vehicles and their deployment throughout the City.

Planned Performance Outcomes

Detailed below are the strategic project’s long-term goals, expected outputs and planned outcomes of the project aligned to a unified North Star vision for the City of Detroit’s American Rescue Plan Act of 2021 (ARPA) State and Local Fiscal Recovery Funds (SLFRF) Program. The long-term goals guide the project’s overall direction in alignment with the program’s North Star. Near-term outcomes are accomplished during the period of performance, demonstrating program impacts of change while outputs provide project performance indicators to record actions.

Figure 20 shows the project’s long-term goals, near-term outcomes, and outputs. Associated key performance indicators or outputs for the project are described in the Performance Reporting section.
In the Upper Peninsula’s Houghton County, officials in Franklin Township voted unanimously to decline $146,431 in stimulus funding — and it wasn’t a hard decision, Supervisor Mary Sears told Bridge Michigan.

“There’s too many things you have to comply with in order to accept that money, and we don’t need it,” she said. “It’s not like it’s life and death for us, you know?”

The recalcitrance is rare in Michigan, as the vast majority of governments have welcomed the stimulus and called it a “transformational” opportunity to make long overdue improvements.

All told, the American Rescue Plan Act that President Joe Biden signed into law in March included roughly $4.4 billion for Michigan local governments, along with another $6.5 billion for the state.
Northern Michigan township board considers giving selves bonuses with COVID relief funds
